

APTA Pediatrics COVID-19 Survey

Purpose of survey: Gather data to provide targeted support and resources to support our membership

Responses: 449 current member respondents; 55 student/new professional respondents

Date of survey: 5/6/20-5/20/20

KEY MESSAGE: The most significant impact of COVID-19 for our members was the barriers to initiate and follow through with telehealth/online and distance learning

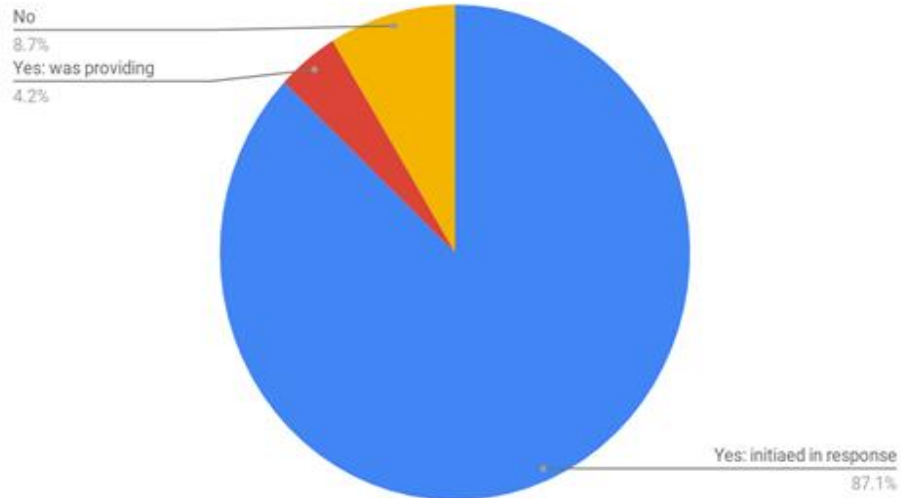

Members struggled to balance the demand of stay at home orders and the new territory of telehealth/online/distance learning	Client skill regression is at the forefront of member concerns pending eventual reopening of states	The survey results outlined the need to provide members with ongoing support and resources
Almost 60% of 446 active member respondents reported this struggle to balance the two environments	30% of the 447 active member respondents considered this a barrier in returning to practice	75% of 445 active member respondents report webinars and resource sheets are effective tools.

KEY MESSAGE: The impact of COVID-19 on Student and New Professionals for members was to determine the current information source of students/new professionals (and the availability of the APTA pediatrics COVID-19 resource page)

APTA membership in Pediatrics	New Professional	Request for Advocacy
90% of 55 respondents are members of the APTA Pediatrics	60% of 55 respondents are new professionals in the field	Resources for employment with 70% receiving information through Facebook

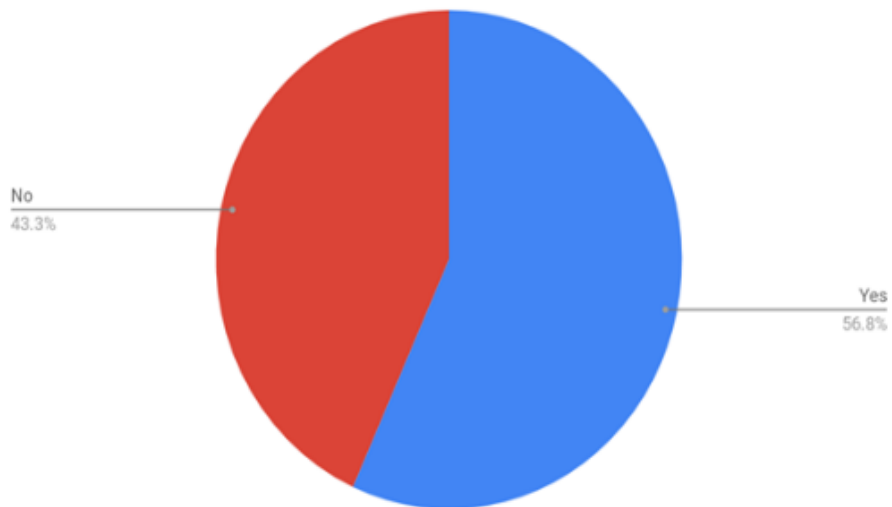

Is your practice or academic institution providing services/online learning? (448 responses)

Points scored
