List of Pediatric Assessment Tools
Categorized by ICF Model

The purpose of this document is to organize tests and measures by the domains of the ICF Model. Tests included were published or revised after 1990. Tools on this list are commonly used but inclusion of a tool does not equate with an endorsement or statement of reliability and validity. Users must access manuals and research reports for more details. The reference list at the end of the document is a select list of key resources. Additional tools can be found in the companion document, List of Pediatric PT Assessment Tools (http://pediatricapta.org). If you have additional tools or measures that you believe should be added to this list, please e-mail suggestions to the Section on Pediatrics at cindysliwa@apta.org.
